

BLANK CARDS

When it comes to cards for use in ID card printers, we offer a complete range to satisfy all requirements. Whether it is plain cards, pre-printed or cards for use in conjunction with access control, time and attendance, cashless vending...just ask.

For extra security, we also offer a host of options to ensure your cards retain the highest integrity. Our cards are subjected to stringent quality tests to ensure a perfect surface for dye sublimation printing. Cards are supplied blank or pre-printed, are made to ISO standard, and are all 760 micron (unless stated) and credit card size. Cards are shrink wrapped in 100's to protect against contamination and dust.

1) Coloured PVC

Ideal for membership and business cards. Colours available: Black, Blue, Brown, Cream, Green, Orange, Pink, Red, Yellow

Description	Code
Standard coloured PVC	336-8004
Black plain silk finish PVC	336-8069

2) Metallic Coloured PVC

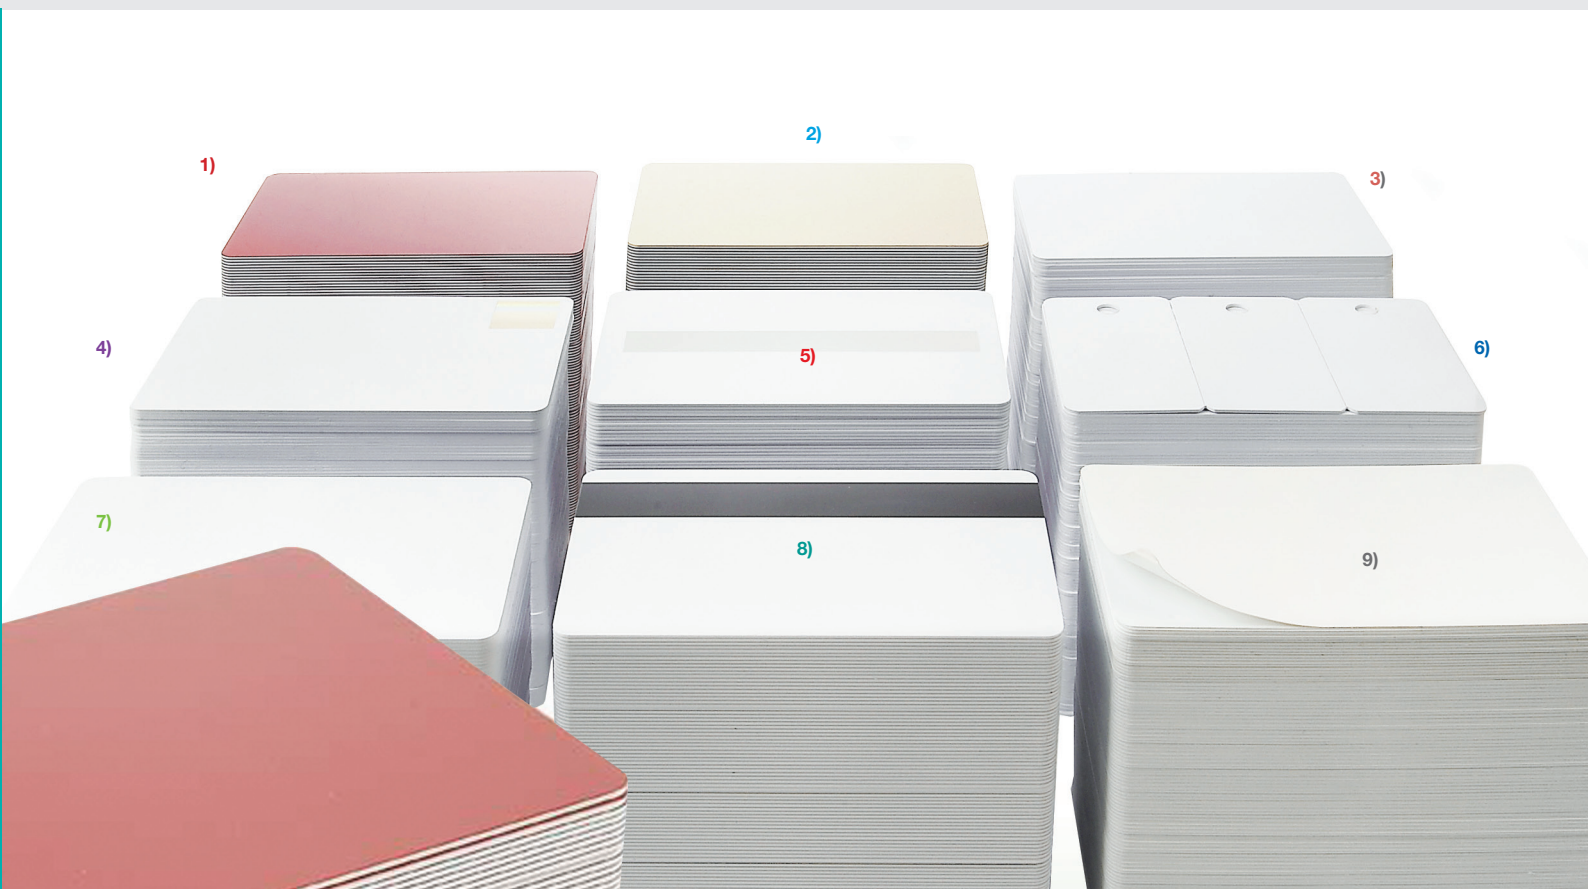

For that 'upmarket' look, try our metallic cards. Colours available: Gold, Silver from stock. Others on request.

Description	Code
Metallic coloured 760 micron PVC	336-8003
Standard/Metallic cards with HiCo	336-8040

3) Rewritable Cards

Cards with a special coating to work with rewrite card printers. Reprint the same card up to 500 times!

Description	Code
Plain White rewritable cards	336-8089

4) HoloPatch Cards

For use with the HoloKote key feature in Magicard printers to add security. Available in silver or gold.

Description	Code
HoloKote card - Gold patch	336-8033
HoloKote card - Silver patch	336-8129

6) KeyTag Cards

Tag cards are a normal card split into 3 with a hole punched in each tag. Print and snap off.

Description	Code
3 tag	336-8130

8) Mag Stripe

Cards are available with a magnetic stripe. These can be LoCo or HiCo.

Description	Code
HiCo mag stripe cards - Premium	336-8001
HiCo mag stripe cards - Economy	336-8076
HiCo mag stripe cards - Composite (60/40)	336-8017
LoCo mag stripe cards - Premium	336-8012

5) Signature Cards

Where a signature is required. Available with strip in different positions.

Description	Code
Signature strip - Top	336-8010
Signature strip - Centre	336-8131
Blank with signature strip + HiCo	336-8013

7) Plain White

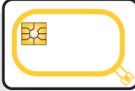

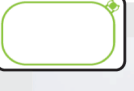

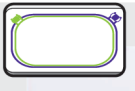

Description	Code
Plain	
White PVC 760 micron - premium	336-8000
White PVC 760 micron - economy	336-8077
White composite 760 micron - (60/40)	336-8016
White PVC 480 micron - economy	336-8023

9) Self Adhesive

Where surfaces are not conducive to dye-sublimation printing, self adhesive cards are the answer.

Description	Code
Self-adhesive - 480 micron	336-8027
Self-adhesive - 400 micron	336-8099
Self-adhesive - 320 micron	336-8025

Contact

A wide range of contact memory cards are available. The most popular are listed. If not listed, please ask for a quote.

Contactless

High quality, contactless cards are available in a variety of different formats. Cards can be pre-printed on request. Mifare cards can be printed and encoded with the BM 6400 software.

Pre-Printing

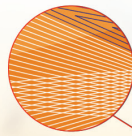

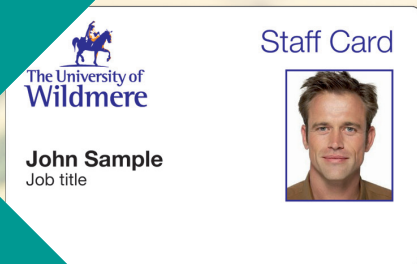

All the cards - contact and contactless - can be provided blank or pre-printed. They can also be personalised via our bureau service. Please let us know your requirements and we can provide you with a quote.

PRINTED CARDS

Choose pre-printed cards for the highest quality reproduction of logos or graphics, or where static text or a graphic is required on the reverse. If you require on site personalisation then a pre-printed card will reduce printing time per card and speed up the issuing process. Many applications require precise colour matching of Pantone colours or if more intricate, security designs are required, then it is advisable to use pre-printed cards.

SECURE CARDS

Security Printing

With the growing numbers and reducing costs of card printers now available, card issuers are facing an uphill battle against forgeries and card copies. Much of this can be avoided by introducing simple security features into the card design. Used in conjunction with card printers that also add a security laminate overlay, secure, tamperproof cards can be produced. Depending on the level of security required, there are a range of printing techniques that can be used.

Holo Designs For extra security we can pre-print your cards with a holodesign. A combination of diffractive and non-diffractive foils produce a 2D, hologram-like effect, yet with a low set-up cost. Gold and silver foil available for a high security, high quality finish.

Guilloche These fine line, intricate lace patterns are impossible to reproduce with a desktop printer. They provide a watermark style backdrop to your cards, similar to those used on banknotes, passports etc.

UV Printing This covert feature involves printing a design in a clear ink which is invisible in daylight, but clearly visible when exposed to a UV light.

Holo Images These can include intricate detail and patterns to near photographic quality within a diffractive or metallic foil.

Holograms Offer the ultimate in security. Layers of images are overlapped giving an illusion of depth. Highly secure and ideal for larger, security projects.

Micro Text Cards with pre-printed text that can only be read with magnification or with UV exposure. Colour Shifting Ink Cards With a specified image of colour shifting inks formulated to change from one colour to another. This feature is part of the inner layer of the card and cannot be scratched, or removed.

HoloPatch/HoloKote For cost effective security, standard holopatch cards can be used in conjunction with Magicard printers and Holokote keys.
